

SecureIT

Mobile Quick Start Guide

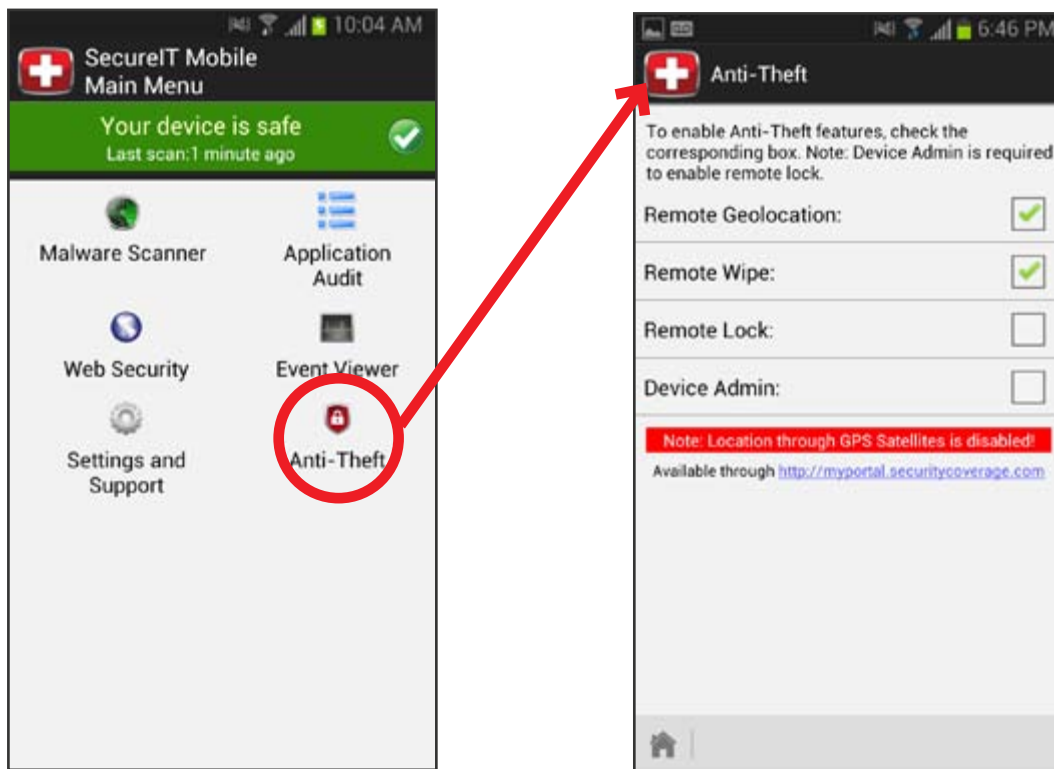

Setup | Use | Support

Setting up SecureIT

If you didn't enable anti-theft during installation, it's a good idea to immediately enable your anti-theft features and avoid any worst-case scenarios should your device be lost or stolen.

To set up your anti-theft features:

1. Press the **Anti-Theft** icon on the home screen.
2. For each feature you would like to enable, slide the "Off" switch to **"On"**.

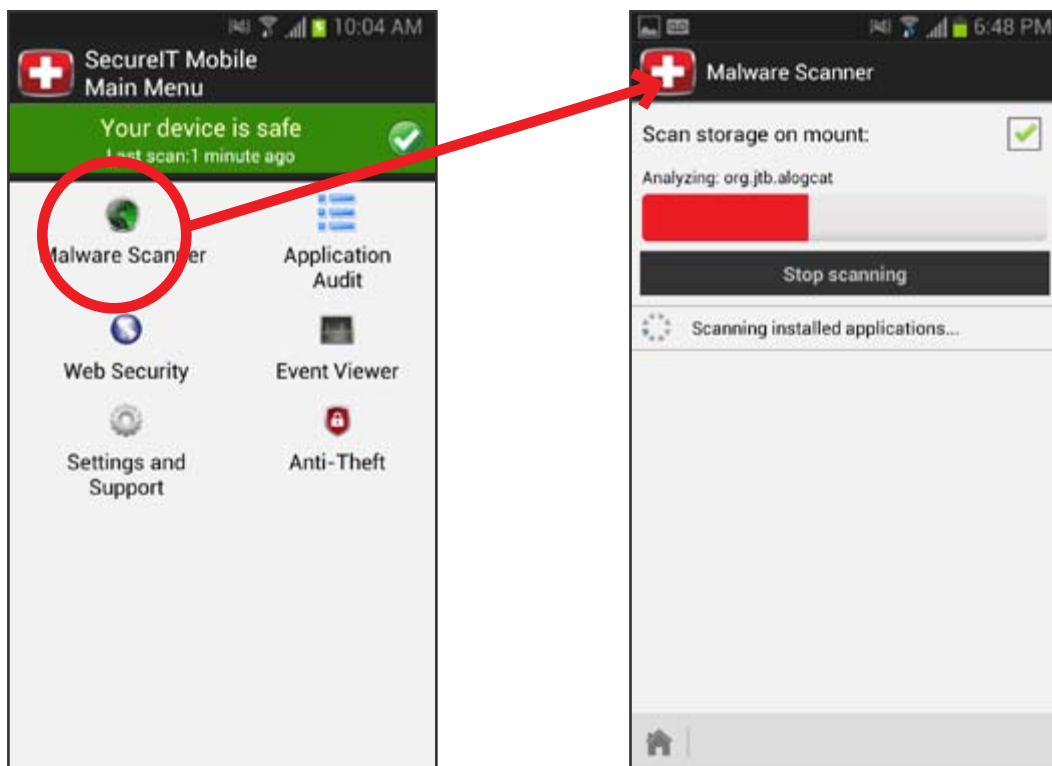

Running a Manual Scan

SecureIT runs invisibly in the background, always scanning and protecting your device. However, after installation we recommend that you conduct a scan of your device manually to check for issues.

1. Open the **SecureIT** app.
2. Press **Malware Scanner**.
3. Press the **"Start Scanning"** button to begin the process.

SecureIT will scan your device and any attached storage units for malicious software. The results of the scan will be displayed upon completion.

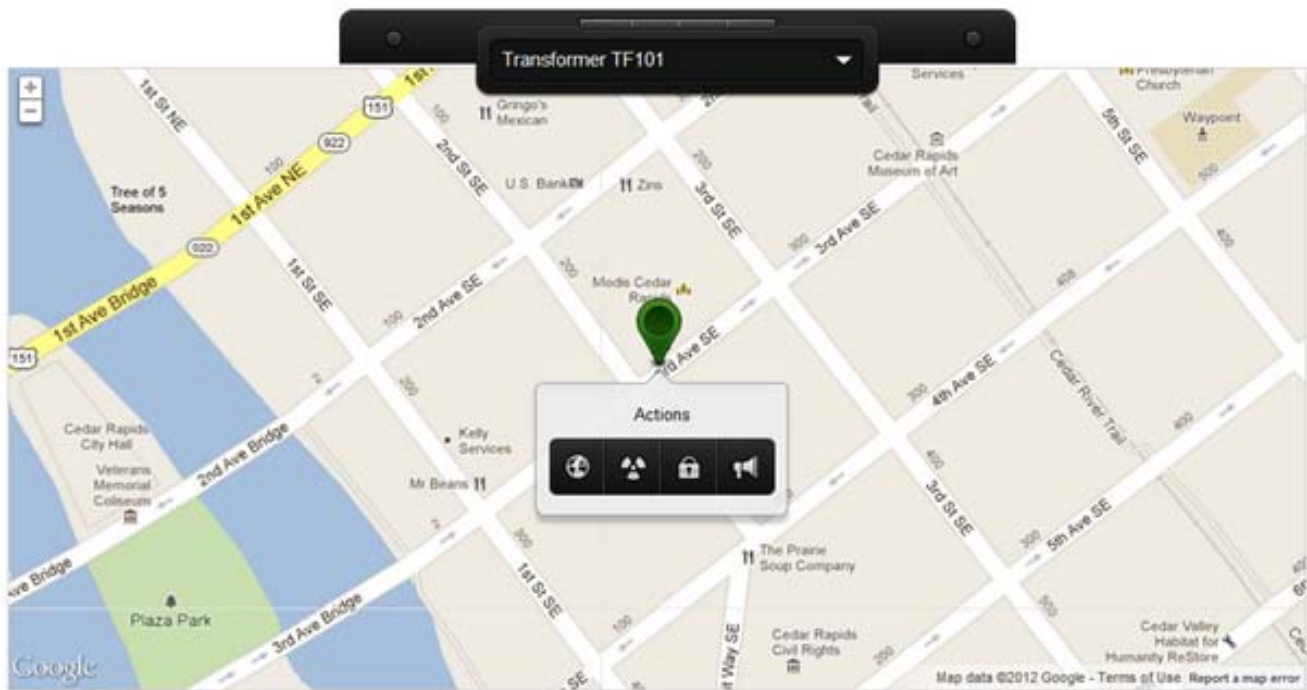

If a malicious app is found, don't panic! Press the red **X** next to each app listed by SecureIT to remove the app permanently.

Using Your Anti-theft Features

SecureIT will automatically keep your device safe and secure. But what happens if you lose your device or it gets stolen? If you have set up anti-theft on your device, you've got some great options. Follow the steps below:

1. Go to www.securitycoverage.com and log into MyPortal at the top right corner from any Internet-connected computer or device (use your Google ID or the email address and password you used to register SecureIT).
2. Select your device from the dropdown menu at the top of the map.
3. Select the action you'd like to perform: Remote Locate, Remote Message, Remote Lock or Remote Wipe.

Remote Locate: Find your device via GPS (GPS must be enabled on your device).

Remote Message: Send a message (and optionally a sound) to your device. Useful if you think your phone might be under the couch!

Remote Lock: Lock your device with a unique code to prevent unauthorized access.

Remote Wipe: Permanently delete all your personal data from your device.

Additional Help
